Case Study

This case study can be used for identifying the right ML Engineering talent for Trading & Digital Analytics teams in adidas

Problem Area

Productionize ML Notebook

Dataset

The dataset is based on Spaceship-Titanic Overview

Dataset Link

Code

Refer the notebook to work on following next steps.

[Notebook Link](#)

Requirements

1. This is a raw notebook and expectation is to make it a production ready.
2. Convert this into a git project and deliver as your github repo
3. Dockerize the project for build and execution
4. Build CI pipeline using jenkins (optional, can also picked during discussion)

What would be evaluated with the case study?

As an ML Engineer for this case study the candidate needs to also focus on following points (Only from discussion perspective and no specific execution)

1. What could be some of the model calibration activities for the current model
2. How can you improve the dataset quality
3. Offline/Online evaluation setup
4. Model monitoring setup
